ADSL Multi-Site

Many ISPs offer the standard range of capped and uncapped ADSL services, usually only with the end user in mind. However, if you are an administrator who is in charge of managing the Internet access for all your branches or users, you'll need far more than this.

MWEB Business's ADSL Multi-Site product enables you to manage, track and cap various ADSL accounts, all of which are collated into a single invoice at the end of the month. Through ADSL Multi-Site, MWEB Business provides you with the ability to:

- Provision your own ADSL user accounts.
- Set cap restrictions per user account as you prefer.
- Receive a daily report of all usage consumed per user.
- Receive a single monthly bill for all usage consumed.

How does ADSL Multi-Site work?

MWEB Business has created a secure online interface for you to manage your ADSL user accounts directly via the MWEB Business ADSL infrastructure.

This allows you to create user accounts and specify individual monthly usage caps per user account as necessary. You can also specify the names and email addresses of the user accounts so that each person receives their own daily usage reports. This helps users to monitor and control their own data consumption throughout the course of the month.

How much does it cost?

ADSL Multi-Site consists of two monthly charges:

- Minimum monthly usage charged monthly in advance.
- Additional monthly usage charged monthly per GB in arrears.

ADSL Multi-Site

Minimum monthly usage:

There are a number of Multi-Site packages suitable for all sizes of companies, starting from a minimum rate based on usage of up to 10GB of blended local and international bandwidth per month.

You may pre-select your own monthly usage limit. Once you reach this limit your international access will be halted, but you will be able to browse locally for free, up to 10 times your original chosen limit (or 60GB, whichever comes first).

For example, if you choose a 2GB limit for the month, once you reach this you will be able to continue browsing locally up to a 20GB limit. If you increase your blended cap during the month, the new cap will be used to determine the local only cap allocation. This will only be applicable to the end of the specific month.

Services	Setup (Incl VAT)	Monthly (Incl VAT)
ADSL Multi-Site 5GB Minimum	n/a	R405
ADSL Multi-Site 10GB Minimum	n/a	R810
