

Wireless Broadband

3G HSDPA

MWEB Business now offers South African businesses a 3G HSDPA Wireless Broadband solution powered by Vodacom. 3G HSDPA enables users to connect to the Internet, access e-mail and operate business services from either a fixed location via the router, like an office, or from anywhere via the data card.

What we offer

Single point of contact for your broadband solution: gone are the days of contacting one company for access and the other for Internet services. MWEB Business offers you one point of contact for all aspects related to broadband Internet: including single invoicing and technical support.

Dial Redundancy: When you purchase your 3G HSDPA solution or any other Wireless Broadband solution from MWEB Business, you have the option of subscribing to an MWEB Internet account (dial-up connection) at the reduced cost of R40 per month.

Value-added services: All MWEB Business Wireless Broadband solutions include an MWEB Internet account, an mweb.co.za e-mail address, a 2GB mailbox, 300 free WiFi minutes as well as anti-spam and virus protection services.

3G HSDPA: giving you instant access to the Internet wherever you are. As long as you have your notebook computer and your 3G HSDPA data card, you will be able to retrieve and send e-mail and access your company network or intranet – all at an affordable rate. 3G HSDPA is a technology enhancement with performances comparable to today's wireless LAN services, but with the added benefit of mobility and ubiquitous coverage. 3G HSDPA enjoys wide coverage throughout the country and international roaming is also possible via a partnership with Vodafone, providing high-speed data access in all Vodafone HSDPA enabled partner networks

3G HSDPA Boosters: can be purchased via the Sales channels or by accessing the My Account interface. The Boosters give the customer the ability to increase the Bundled Data and to enjoy the lower per MB costing of the Booster compared to the per MB price of out of bundle data.

Wireless Broadband

3G HSDPA

3G HSDPA Router: activated by inserting the data card, the 3G HSDPA Router allows you to create a portable office by linking different devices in a wireless network. This “semi-fixed” networking solution is ideal for nomadic professional workgroups such as consultants, auditors and accountants, as it allows for the creation of temporary connections at a particular site, for example, at a business event or client office.

3G HSDPA is cost-effective, secure and easy to manage - and comes with software that includes a usage counter giving you an indication of the amount of data transferred through the data card in a given month. It is easy to set-up – literally plug & play – with no waiting and no searching for a connection point.

It's the business tool that you've been waiting for – one which allows you to take the Internet and your company network with you wherever you go.

What is a Wireless Broadband 3G HSDPA Router?

The 3G HSDPA Router allows one or multiple devices access to the Internet using only one data card. It affords you the opportunity to create your very own network wherever your offices happened to be. It is also ideal for business users requiring portability while being away from the office.

Benefits include:

- Easy to install and manage.
- No complex set up processes and cables.
- The ability to connect multiple devices from one makes this a very cost effective solution.
- Portability of the service means that once you have left your office, you can connect from any other location where Vodacom has coverage.
- Secure
